

A Partnership Through N2N's Illuminate

Class Scheduler

According to Courshedog's research, on average, schedulers spend roughly 2-3 weeks each term fixing and editing schedules. Moreover, 50% of universities still schedule manually, while 33% of those hope to implement a solution within the next year. Needless to say scheduling has become a tedious and time-consuming process.

This is where Courshedog comes in. Courshedog's scheduling software allows universities to skip the manual schedule building—instead, Courshedog builds the schedule for you, optimizing course and room scheduling, and massively decreasing the potential for unchecked overscheduling, room bottlenecks, double-booking, and other scheduling policy infringements or mistakes.

Courshedog's partnership with N2N's turnkey cloud integration platform, Illuminate, allows higher education users to connect Courshedog's scheduling applications with their ERP, including Ellucian, Peoplesoft, and Jenzabar.

Offer the right courses, seats and sections

Courshedog provide reporting and analytics such as course demand projections to help you identify high-impact changes that will help your students and staff.

Automatically enforce policies

Courshedog provides alerts when schedulers make errors: such as being out of compliance your scheduling policies, scheduling two classes together that should not be at the same time, or double-booking.

Automatic, Perfect Room Assignments

Courshedog's algorithm auto-assigns courses to rooms based on course size, equipment requirements, seating layout and instructor-led preferences.

Handle Requests for Exceptions With One Click

Coursedog provides a ticketing system and recommendation engine so you can accommodate change and exception requests with one click.

Schedule Events with the Event Scheduler

Customize Event Requests and Approvals

Use Coursedog's configurable, dynamic forms to ensure relevant and quality submissions, and eliminate the collection of unnecessary information. You can route these forms through workflows so that administrators can easily track event requests and take action.

Auto-Notify all Stakeholders of Relevant Event Information

When an event is approved, you can automatically notify all stakeholders of the information they need to make your event a success. Send out custom email notifications, calendar invites, service orders or invoices. If someone requests a change, it will automatically update all relevant stakeholders of the change through email.

Increase Event Attendance with Promotions

Create a configurable master calendar so that students can see all events across campus, promote featured events, sync events with Google Calendar or Outlook or share events on social media. You can also share a public view so that students or members of the public can request space.

Improve Your Event Strategy With Powerful Reporting

Coursedog provides powerful out-of-box reports to track attendance, participation and engagement. It even provides recommendations about where you could charge more or what events you should try to offer more of.

Build the Perfect Course Catalog

- Intuitive user-interface to handle all catalog changes with speed and accuracy.
- Powerful search and integration with curriculum and schedule.
- Embed video, photos or other content to attract prospective students.
- Brand it with your colors on your website.
- Automatic workflow engine eliminates the manual work in coordinating between stakeholders.
- Access and send archived catalogs in a snap.
- Enjoy real-time saving and updating with multiple stakeholders.

Curriculum Builder

Increase transparency with an intuitive interface for end-to-end approvals, and accelerate curriculum development by easily tracking and updating objectives, requisites and dependencies.

Tight Integrations with Your Systems

Create meeting agendas and integrate with GSuite, Outlook, DegreeWorks and your SIS.

Access 50+ reports to visualize curriculum over time and comparisons with other institutions.
